DETAILED ACTION

Election/Restrictions

- I. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8, 9-16 and 17-24, drawn to rendering an object within a scanline by determining each boundary pixel that overlaps both sides of a border of the object, classified in class 382, subclass 199.
 - II. Claims 25-37, 38-57 and 58-64, drawn to rendering an object within a scanline by decomposing that portion that lies within the currently scanned pixel into closed loops, classified in class 345, subclass 619

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because invention II comprises the limitation of incrementally combining closed loops to calculate winding counts which is not found in the claims of invention I and is not required to render the object according to invention I. The subcombination has separate utility such as clipping objects to a certain bounding box created by the closed loops.

Art Unit: 2676

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated, is proper.
